FRONT WHEEL ALIGNMENT

- 1. MAKE FOLLOWING CHECKS AND CORRECT ANY PROBLEMS
 - (a) Check the tires for wear and proper inflation.

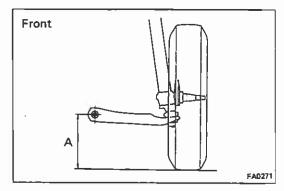

Correct tire pressure: 1.9 kg/cm² (27 psi, 186 kPa)

(b) Check the wheel runout.

Lateral runout: 1.0 mm (0.039 in.) or less

- (c) Check the front wheel bearings for looseness.
- (d) Check the front suspension for looseness.
- (e) Check the steering linkage for looseness.
- (f) Check that the front absorbers work properly by using the standard bounce test.

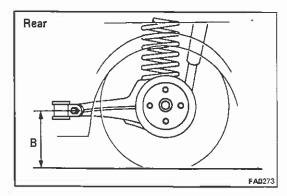

2. MEASURE VEHICLE HEIGHT

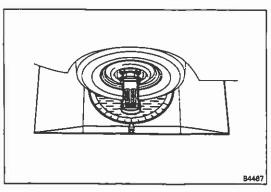

Vehicle height

mm (in.)

Tire size	Front A	Rear B
175SR14	234 (9.21)	242 (9.53)
185/70SR14	230 (9.06)	238 (9.37)
225/60HR14		
СР	231 (9.09)	263 (10.35)
LB	231 (9.09)	267.5(10.531)

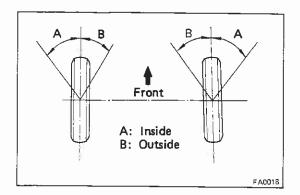

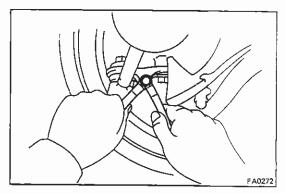

If height of the vehicle is not as specified, try to level the vehicle by shaking it down. If the height is still not correct, check for bad springs and worn or loose suspension parts.

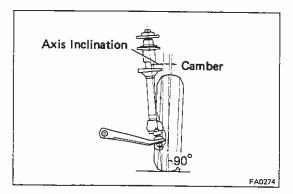

3. INSTALL WHEEL ALIGNMENT EQUIPMENT

Follow the specific instructions of the equipment manufacturer.

4. ADJUST WHEEL ANGLE

Remove the caps of the knuckle stopper bolts and check the steering angles.

Wheel angle:

Inside wheel 38°+0

Outside wheel 30°+1°

NOTE: When the steering wheel is fully turned, make sure that the wheel is not touching the body or brake flexible hose.

If maximum steering angles differ from standard value, adjust the wheel angle with the knuckle stopper bolts.

Torque: 350 kg-cm (25 ft-lb, 34 N-m)

If the wheel angle still cannot be adjusted within limits, inspect and replace any damaged or worn steering parts.

5. INSPECT CAMBER AND STEERING AXIS INCLINATION

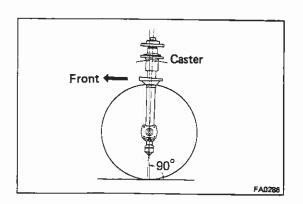

Camber:

Inspection standard 55' ± 45' Adjustment standard 55' ± 30' Left-right error 30°

Steering axis inclination:

Inspection standard $9^{\circ}20' \pm 45'$ Adjustment standard $9^{\circ}20' \pm 30'$ Left-right error 30'

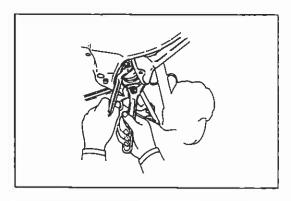

If camber or steering axis inclination checks are out of tolerance, inspect and replace any damaged or worn front suspension parts.

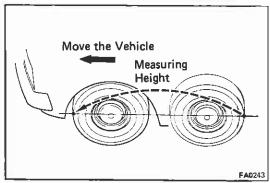

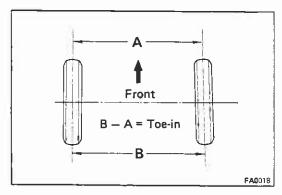

6. ADJUST CASTER

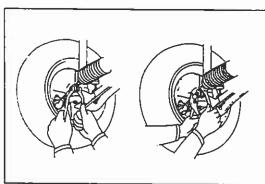

Caster:

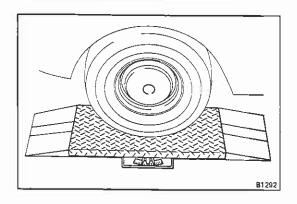

Inspection standard $3^{\circ}20' \pm 45'$ Adjustment standard $3^{\circ}20' \pm 30'$ Left-right error 30'

If caster is out of tolerance, adjust the caster at the staked nuts of the strut bar.

Torque: 925 kg-cm (67 ft-lb, 91 N·m)

NOTE: Decrease caster by lengthening the strut bar. Increase caster by shortening the strut bar. One turn of the nut changes caster by 8'.

If caster still cannot be adjusted within limits, inspect and replace damaged or worn front suspension parts.

7. ADJUST TOE-IN

- (a) Make sure the wheels are positioned straight ahead.
- (b) Mark the center of each rear tread and measure the distance between the marks of right and left tires.
- (c) Advance the vehicle until the marks on the rear of the tires come to the front.

NOTE: The toe-in should be measured at the same point on the tire and at the same level.

(d) Measure the distance between the marks on the front of the tires.

mm (in.)

	Manual steering	Power steering
Inspection standard	4 ± 4 (0.16 ± 0.16)	5 ± 4 (0.20 ± 0.16)
Adjustment standard	4 ± 1 (0.16 ± 0.04)	5 ± 1 (0.20 ± 0.04)

- (e) Remove the rack boot clips and loosen the clamp bolts.
- (f) Adjust toe-in by turning the left and right tie rod tubes and equal amount.

NOTE: Make sure that the tie rods are the same length.

(g) Tighten the clamp bolts and torque them.

Torque: 175 kg-cm (13 ft-lb, 17 N·m)

NOTE: Make sure that the tie rod is perpendicular with the stud.

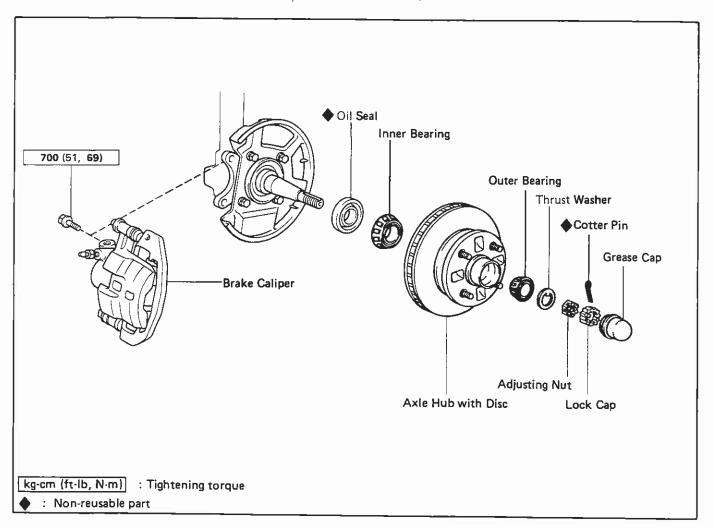

(h) Install the rack boot clips.

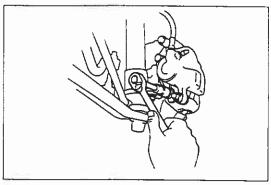

8. INSPECT SIDE SLIP WITH SIDE SLIP TESTER Side slip limit:

Less than 3.0 mm/m (0.118 in./3.3 ft)

If the side slip exceeds the limit, the toe-in or other front wheel alignment may not be correct.
